AgSpire Becomes Member of Ecosystem Services Market Consortium

(BROOKINGS, SD, Thursday, September 1, 2022) - AgSpire, an organization specializing in strategy and implementation of regenerative agriculture solutions in the food, agricultural, and natural resource space, has joined as a member of the Ecosystem Services Market Consortium (ESMC). As a member of the ESMC, AgSpire is further demonstrating its commitment to providing customized solutions for those who want to create positive land-use outcomes.

“At AgSpire, we are passionate about amplifying the implementation of positive land use practices, resulting in tangible and quantifiable outcomes for the environment and our society. This partnership with ESMC shows our commitment to this and we look forward to furthering our mission,” said Aline DeLucia, CEO of AgSpire.

ESMC is transforming decarbonization along the agricultural supply chain through collective action. This complements AgSpire’s work in strategy and implementation of regenerative agriculture solutions for clients in the food, agricultural, and natural resource space. As a member of the ESMC, AgSpire continues to work to truly make a difference in the world we live in.

For more information on AgSpire, please visit www.agspire.com. More information on ESMC can be found at www.ecosystems-services-market.org.

##

About AgSpire: AgSpire provides customized solutions for those who want to create positive land-use outcomes. The organization was founded in 2021 from the passion to amplify the implementation of positive land use practices, resulting in tangible and quantifiable outcomes for the environment and our society. AgSpire specializes in strategy and implementation of regenerative agriculture solutions for clients in the food, agricultural and natural resource space and solves for an increasingly complex agricultural landscape in need of balanced short-term efficiency and long-term viability.

About Ecosystem Services Market Consortium (ESMC): ESMC/ESMRC is a non-profit public private partnership that is transforming decarbonization along the agricultural supply chain through collective action. Our 70+ member organizations spanning the agricultural supply and value chains have collaboratively invested, tested, and launched a harmonized, standardized ecosystem services market for agricultural supply chains. Eco-Harvest, ESMC’s voluntary market program, is an end-to-end digitized solution to decarbonize agriculture and to meet additional natural resource needs of corporates who are making significant investments and operational changes to achieve standards-based, reportable outcomes documenting their progress annually. The program incentivizes, quantifies, and verifies (through independent third-party experts) carbon, greenhouse gas (GHG) and water outcomes annually, paying farmers from the sale of scope 3 outcomes (credits) to corporates.
