

# Promoting positive land use practices.

## OUR BACKGROUND

AgSpire was founded in 2021, growing out of a passion for amplifying solutions within agriculture that result in tangible and quantifiable outcomes for the environment and our society.

Our initial work was with a client pilot project of 50,000 acres, developing a customized strategy to implement regenerative agriculture practices on the participating farms and ranches. With individualized assistance to the landowners, we saw successful implementation on the ground that led to verified results against sustainability targets, including:

- Improved soil health
- Enhanced biodiversity
- Better water quality and management
- Increased carbon capture
- 10:1 return for producers over client investment

Today, we are growing that impact through new collaborations and an expanding client portfolio.

## OUR IMPACT

**1.4M**  
ACRES

**22**  
STATES

We work across commodities, production systems, and value chains, helping our clients make an impact toward their science based targets. In 2023, AgSpire supported projects will reach a cumulative 1.4 million acres in 22 states.
